### **PROJECTS**

#### School Management System (FYP)

In this, we use MERN technology for development. This application is primarily designed for use in schools, where school administrators can register their schools to manage their administrative activities, students logs include attendance, marks, fees, and other related stuff.

#### **Quran App**

It was an android app in which the user registered himself, then logged in with his credentials. Users can read by Surat or by chapter. He can mark Surat and chapters for ease of access. Java is used for development.

#### **Point Of Sale System**

 It was developed in .NET and MVC Architecture was used. In which we perform CRUD operations.

#### **Loan Managment System**

 A web application that provides a platform for the online management of local shops. This application was on java. where a shopkeeper can manage his goods in the shop and also can record all of his sales.

#### **Movie Hub**

 This was built using Nodejs. An entertainment website where users can watch online & download movies. He can subscribe for later recommendation updates..
